TL0339/00 is a colourless, high-gloss acrylic topcoat with excellent flow and transparency. with It is faster drying than traditional acrylic systems, and ensures excellent yellowing resistance. It is much less sensitive to application conditions than polyurethane gloss topcoats, so it minimizes the risk of pinholes, pinheads, and cissing. It must be applied in a sufficient quantity to wet the substrate well.

Buffing is possible 3 days after application.

Special instructions

In case light coats are applied, use thinner DT0441/00. It is possible to substitute TH0790/00 to TH0784/00. If this is the case, like all acrylic products blended with TH0790/00 hardener, it must be applied at a temperature of no lower than 18°C. At lower temperatures drying may not be uniform and the film is liable to lose elasticity and become brittle.
